

# EGAT SLEEP PRESENTATION

พญ วิสาข์สีร ตันตะกุล

ผศ พญ ประภาพร พรสุรยะศักดิ์

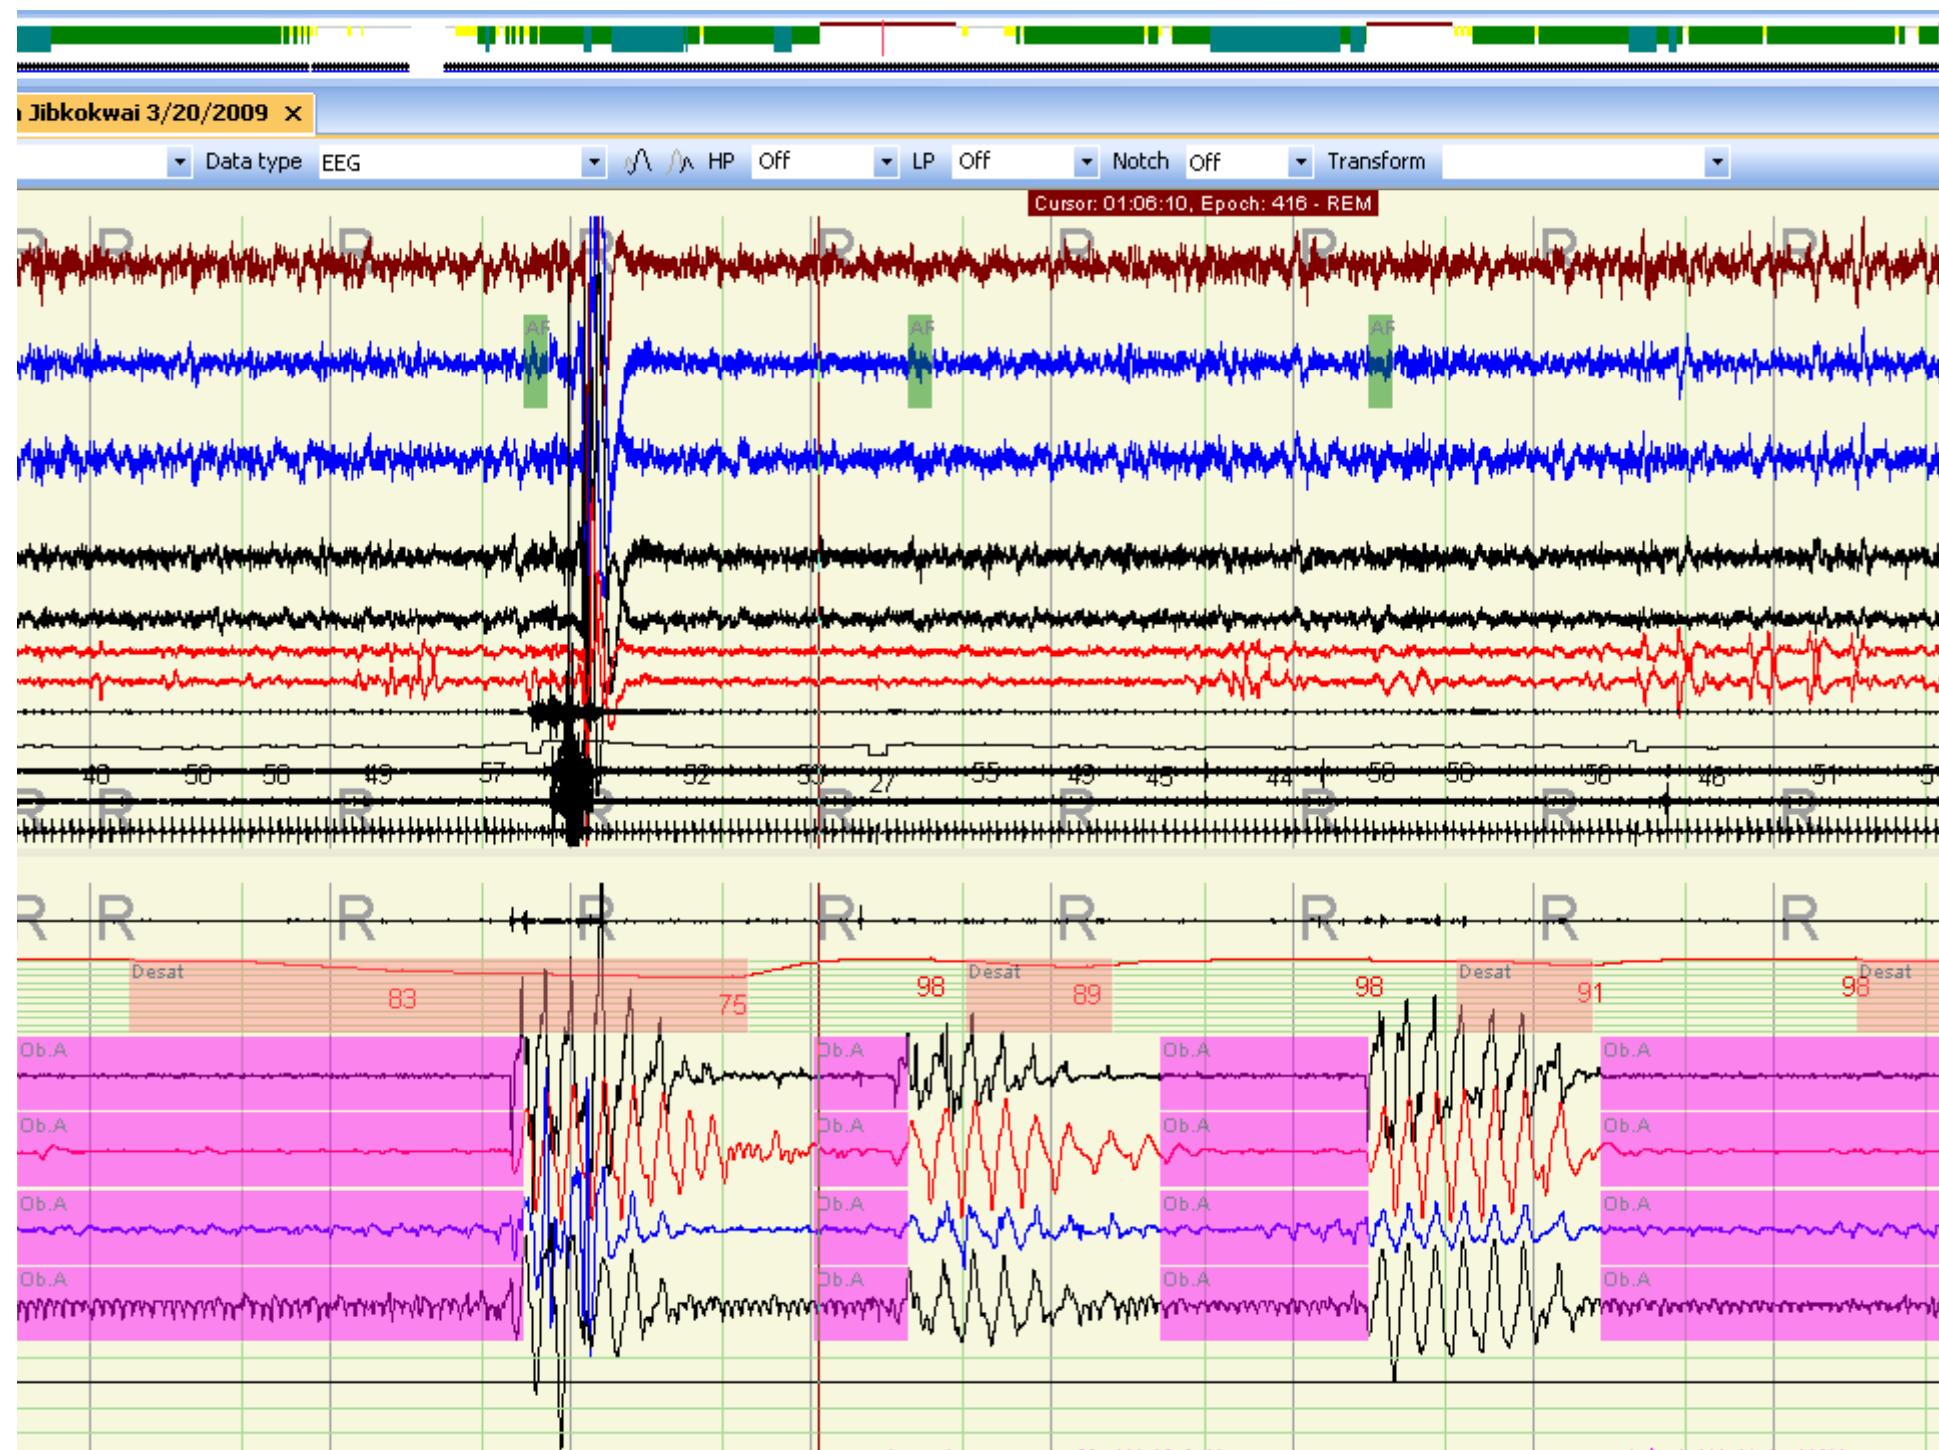

หน่วยโรคระบบหายใจและเวชบำบัดวิกฤต

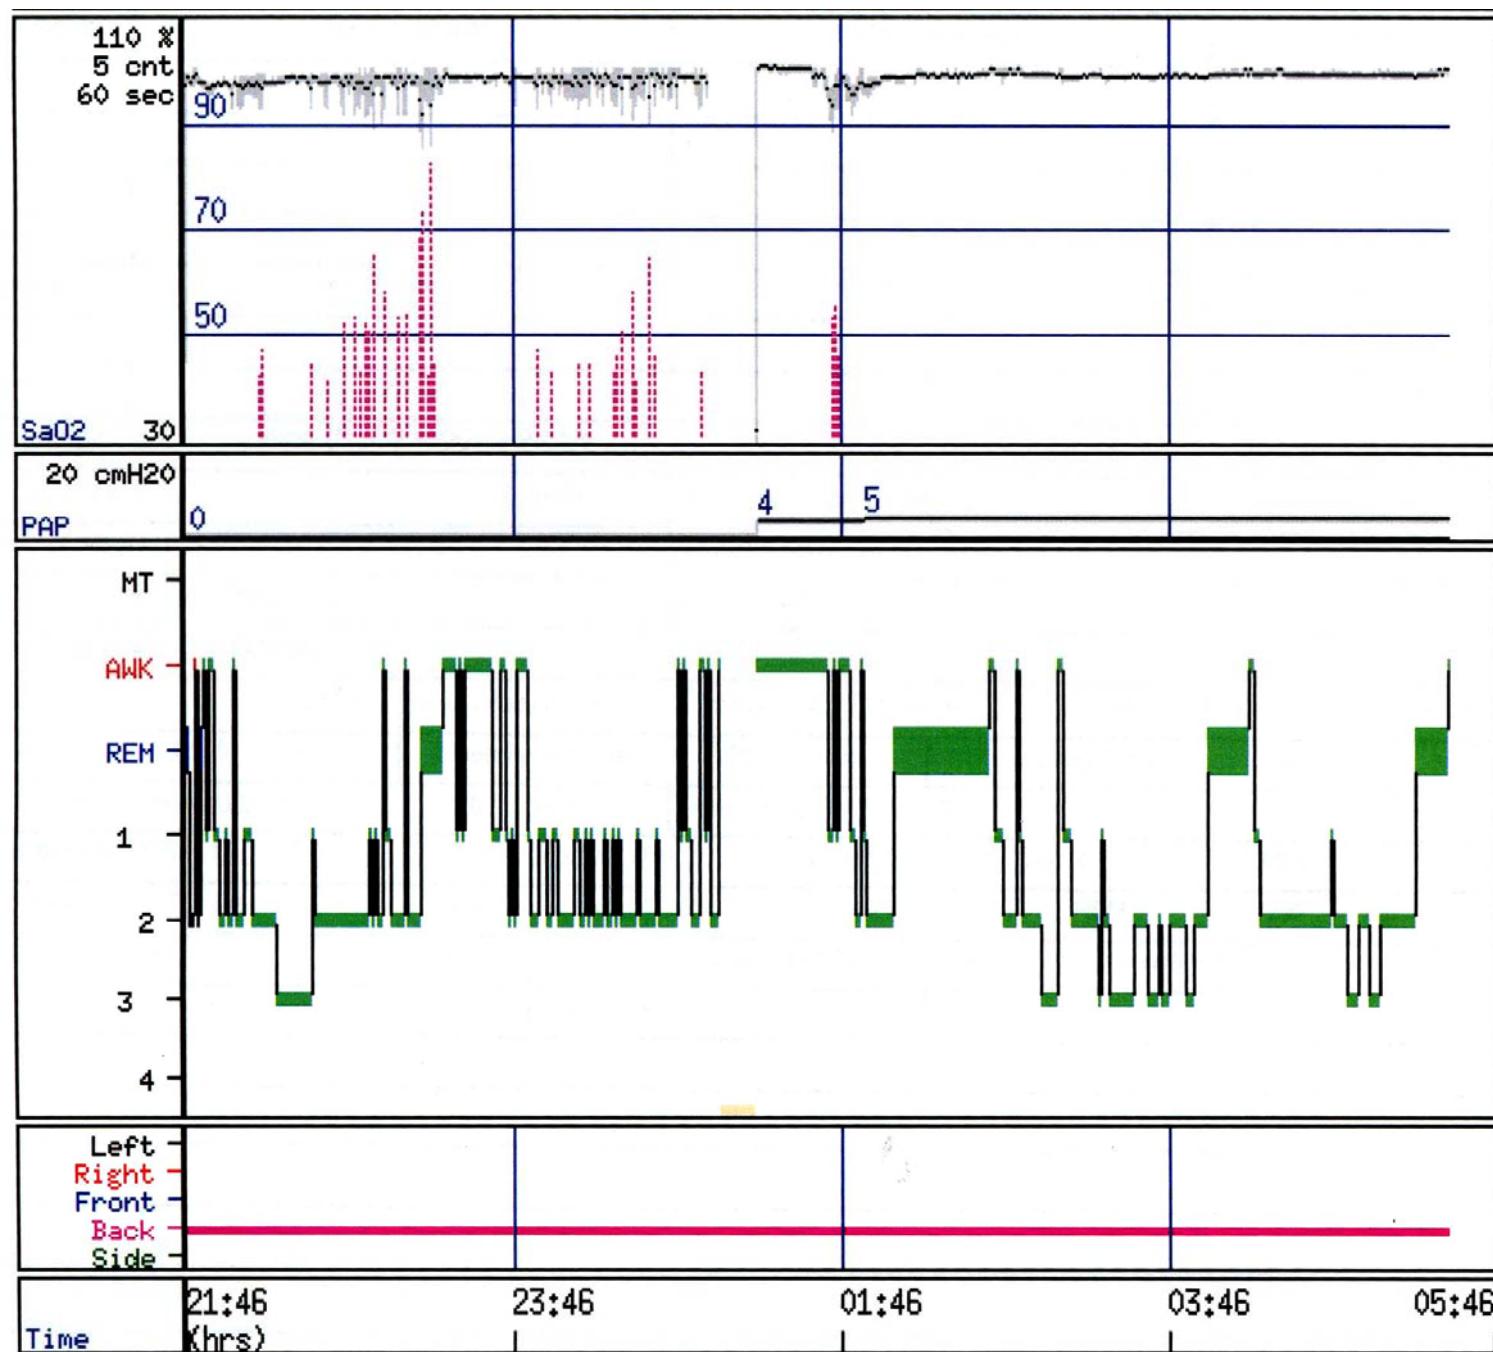

ภาควิชาอายุรศาสตร์ โรงพยาบาล รามาธิบดี

- OSA is Characterized by
  - Recurrent **collapse of pharyngeal airway** during **SLEEP**, resulting in **Apnea or hypopnea** despite **ongoing breathing efforts**.
  - Leading to **intermittent blood gas disturbances**, surge in **sympathetic activation**, brief awakening from sleep  
**( arousals)**
  - **Cyclical breathing pattern and sleep fragmentation**

# OBSTRUCTIVE SLEEP APNEA

- Repetitive partial or complete obstruction of upper airway during sleep
- OSA : Polysomnography
  - AHI of  $> 5$  /hr plus symptom of excessive daytime sleepiness, unrefreshing sleep, or chronic fatigue

# Sleep-disordered breathing and cardiovascular risk.

## Caples Sleep 2007

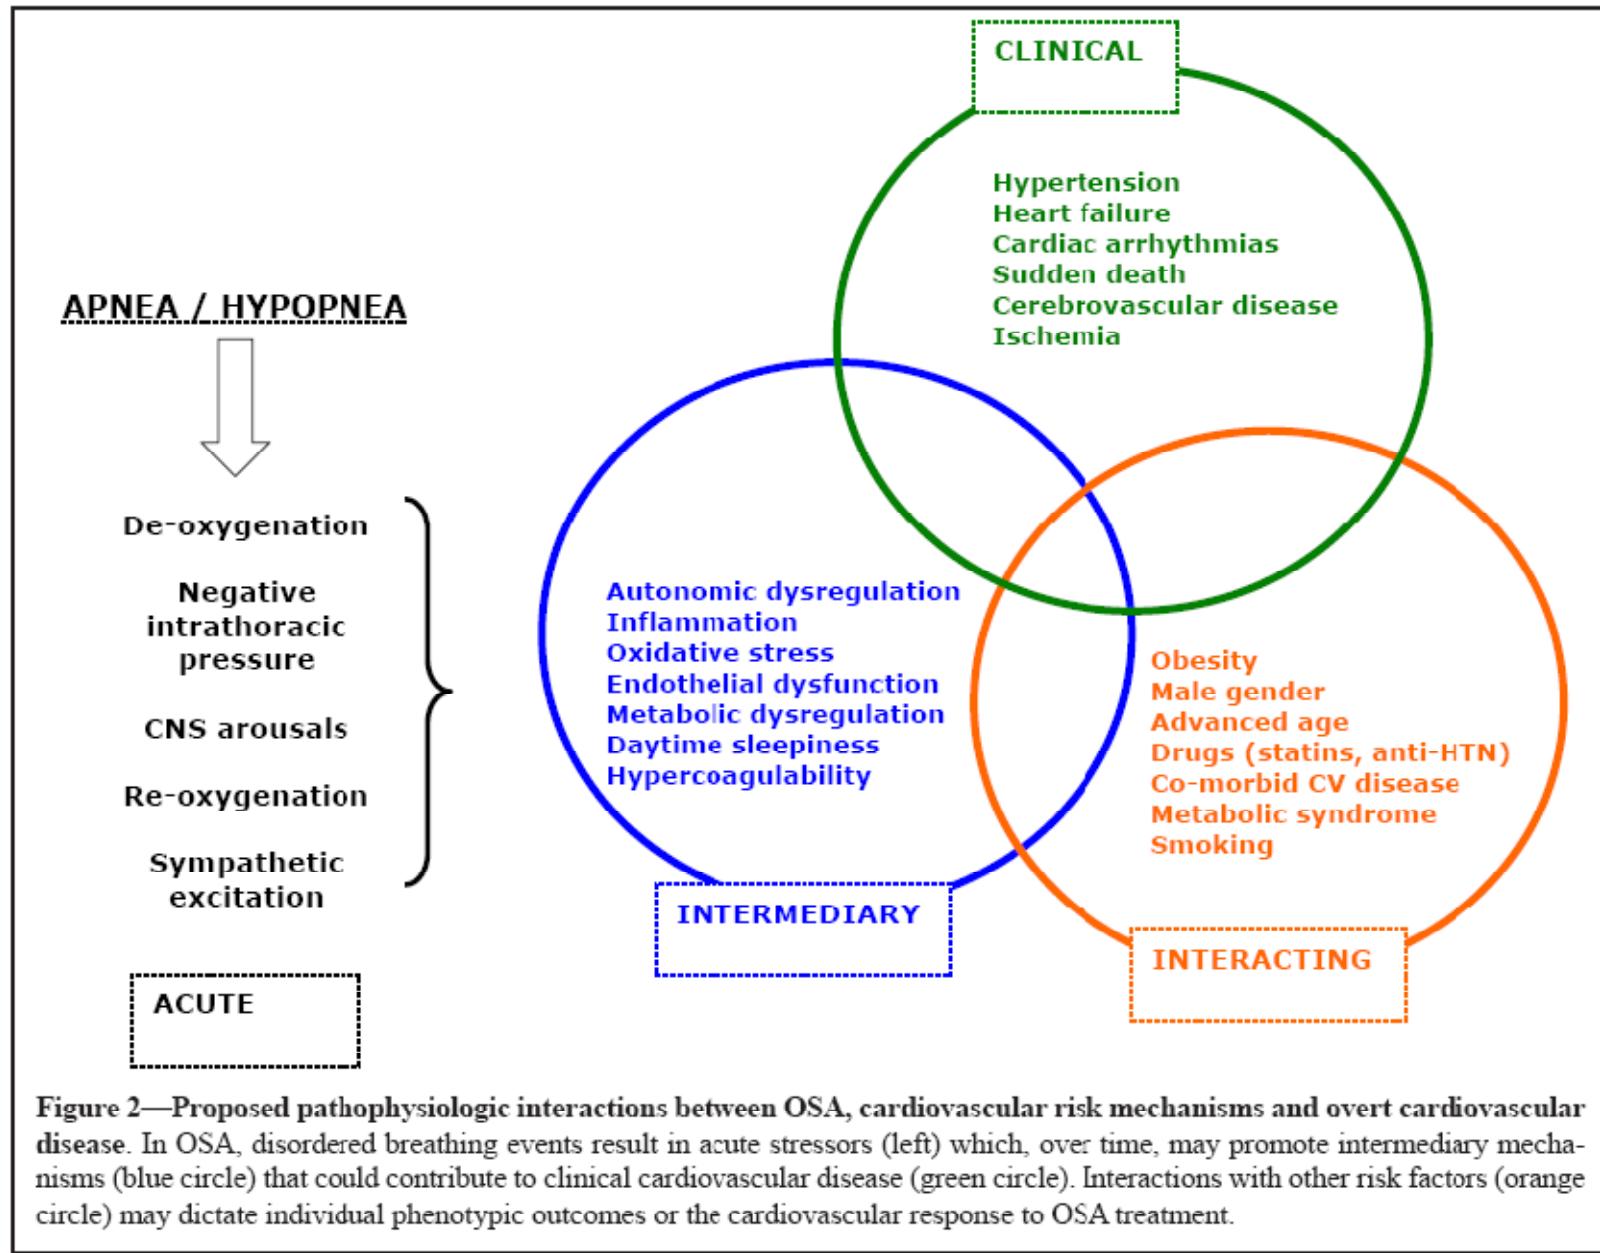

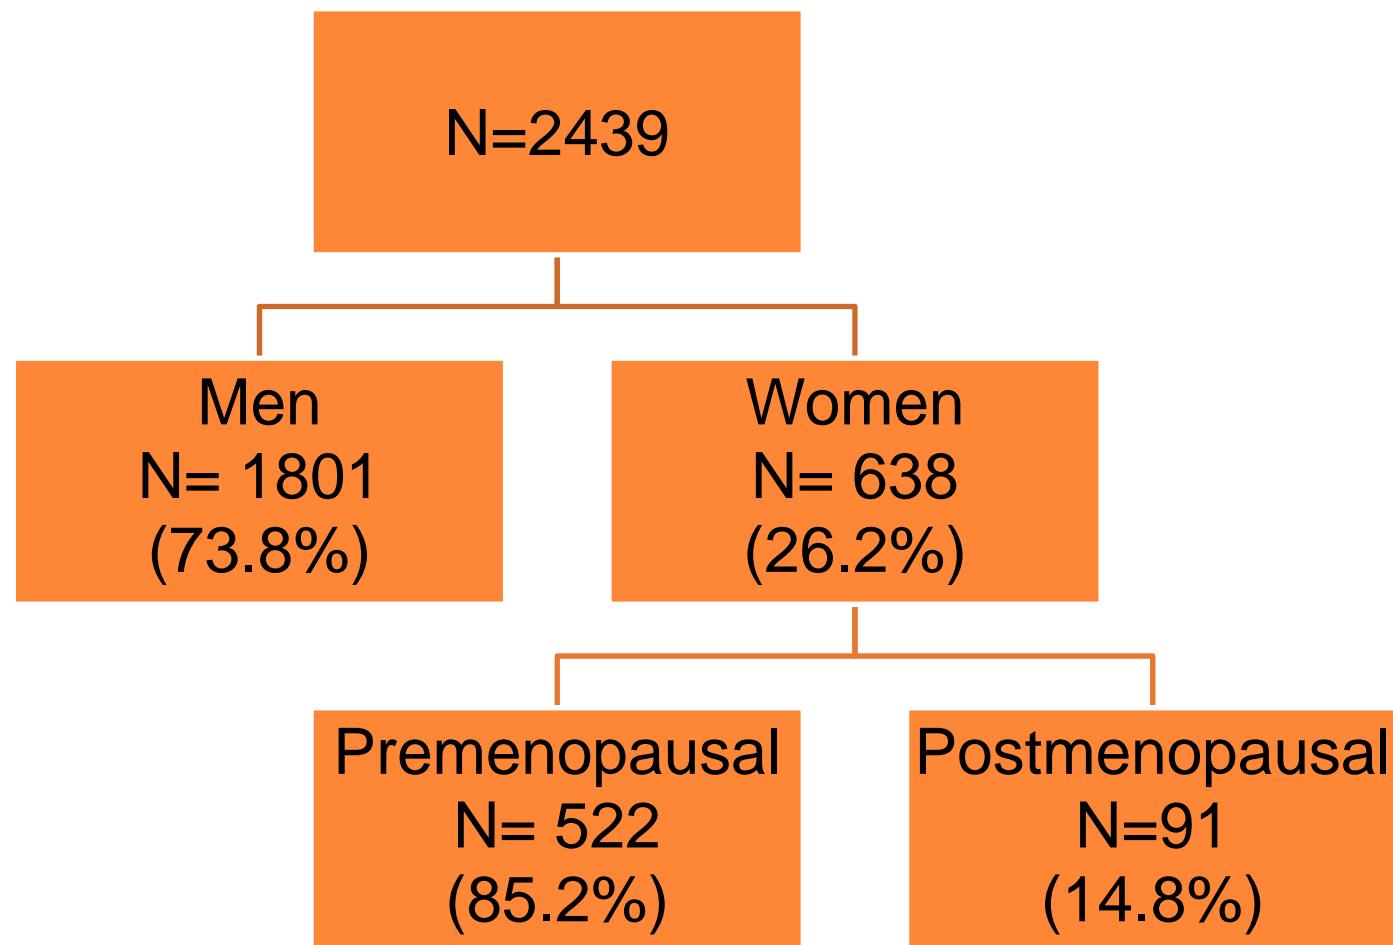

Figure 2—Proposed pathophysiologic interactions between OSA, cardiovascular risk mechanisms and overt cardiovascular disease. In OSA, disordered breathing events result in acute stressors (left) which, over time, may promote intermediary mechanisms (blue circle) that could contribute to clinical cardiovascular disease (green circle). Interactions with other risk factors (orange circle) may dictate individual phenotypic outcomes or the cardiovascular response to OSA treatment.

## DEMOGRAPHIC DATA

<b>Mean±SD (IQR)</b>	<b>Total</b>	<b>Men</b>	<b>Women</b>
<b>Age, yr</b>	$41.12 \pm 7.2$ (25-55)	$41.35 \pm 7.3$ (25-55)	$40.5 \pm 6.7$ (25-54)
<b>BMI, kg/m<sup>2</sup></b>	$24.0 \pm 3.7$ (15.2-47.6)	$24.6 \pm 3.4$ (15.2-47.6)	$22.4 \pm 3.8$ (15.3-40.2)
<b>%Overweight</b>	46.3%	53.3%	26.8%
<b>Waist-hip ratio</b>	$0.88 \pm 0.06$ (0.6-1.2)	$0.90 \pm 0.05$ (0.6-1.2)	$0.82 \pm 0.06$ (0.7-1.0)
<b>Neck Circumference , cm</b>	$36.5 \pm 3.9$ (21.1-49.0)	$38.2 \pm 2.7$ (30.4-49.0)	$31.9 \pm 2.4$ (21.1-40.1)
<b>Menopause(%)</b>			14.8%

## SLEEP QUESTIONNAIRE

- “Obstructive Sleep Apnea (OSA)” was defined

if 1 of the following criteria were met

1. Frequent snoring ( $\geq 3-4$  /week) or
2. Loud snoring, or

### Plus

at least 1 of the the following symptoms

1. Excessive daytime sleepiness
2. Fatigue
3. witnessed apnea

# SLEEP QUESTIONNAIRE

- “Habitual Snorer” was defined if the following criteria were met
  1. Frequent snoring ( $\geq 3-4$  /week) or
  2. Loud snoring, or

But did not meet the criteria for “OSA”

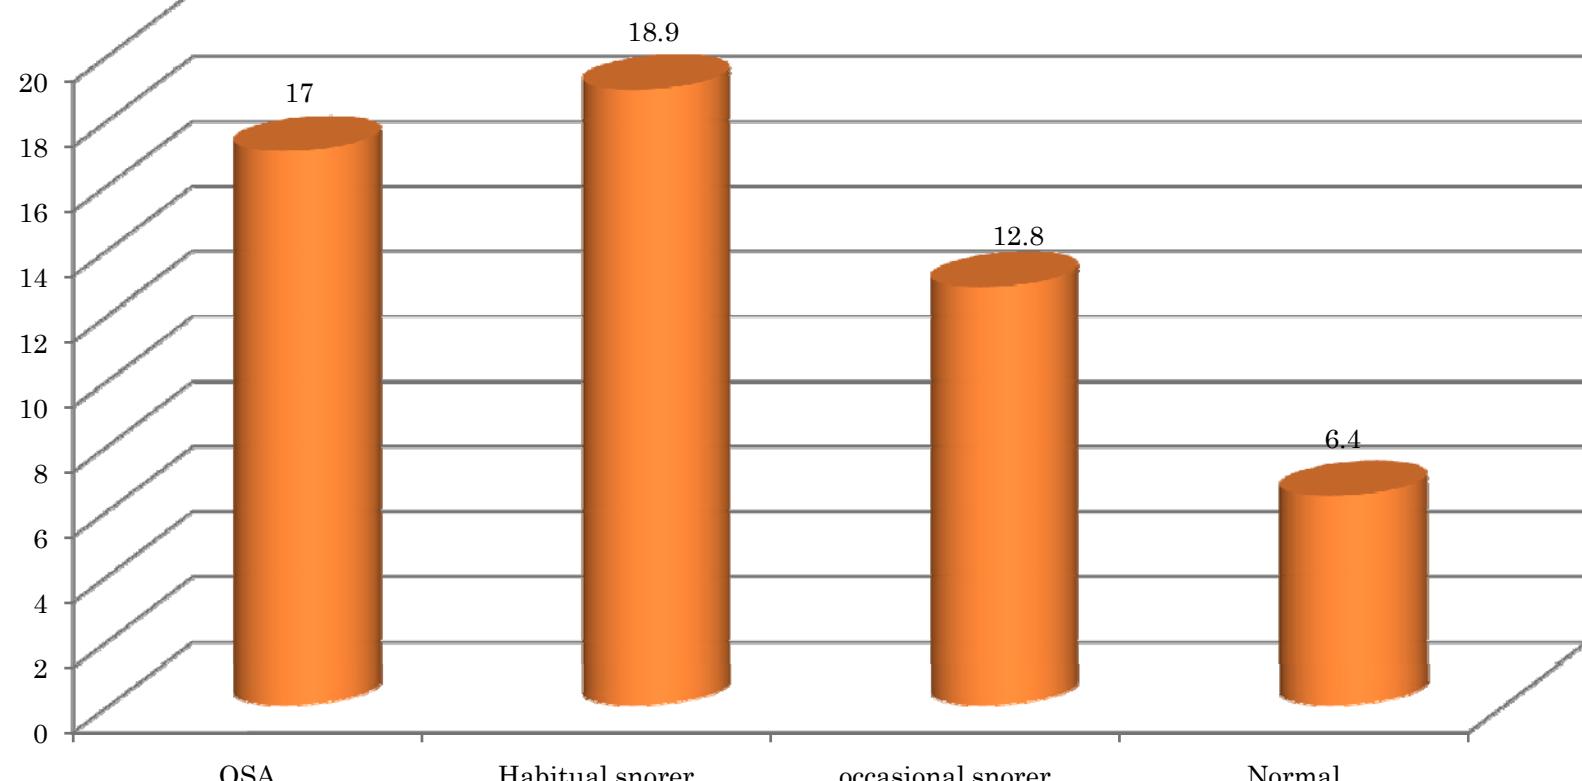

- “**Normal**” was defined if the subjects did not fullfill the criteria for “**OSA**” and “ **Habitual Snorer**”.

## PREVALENCE OF SLEEP-DISORDERED BREATHING IN EGAT POPULATION

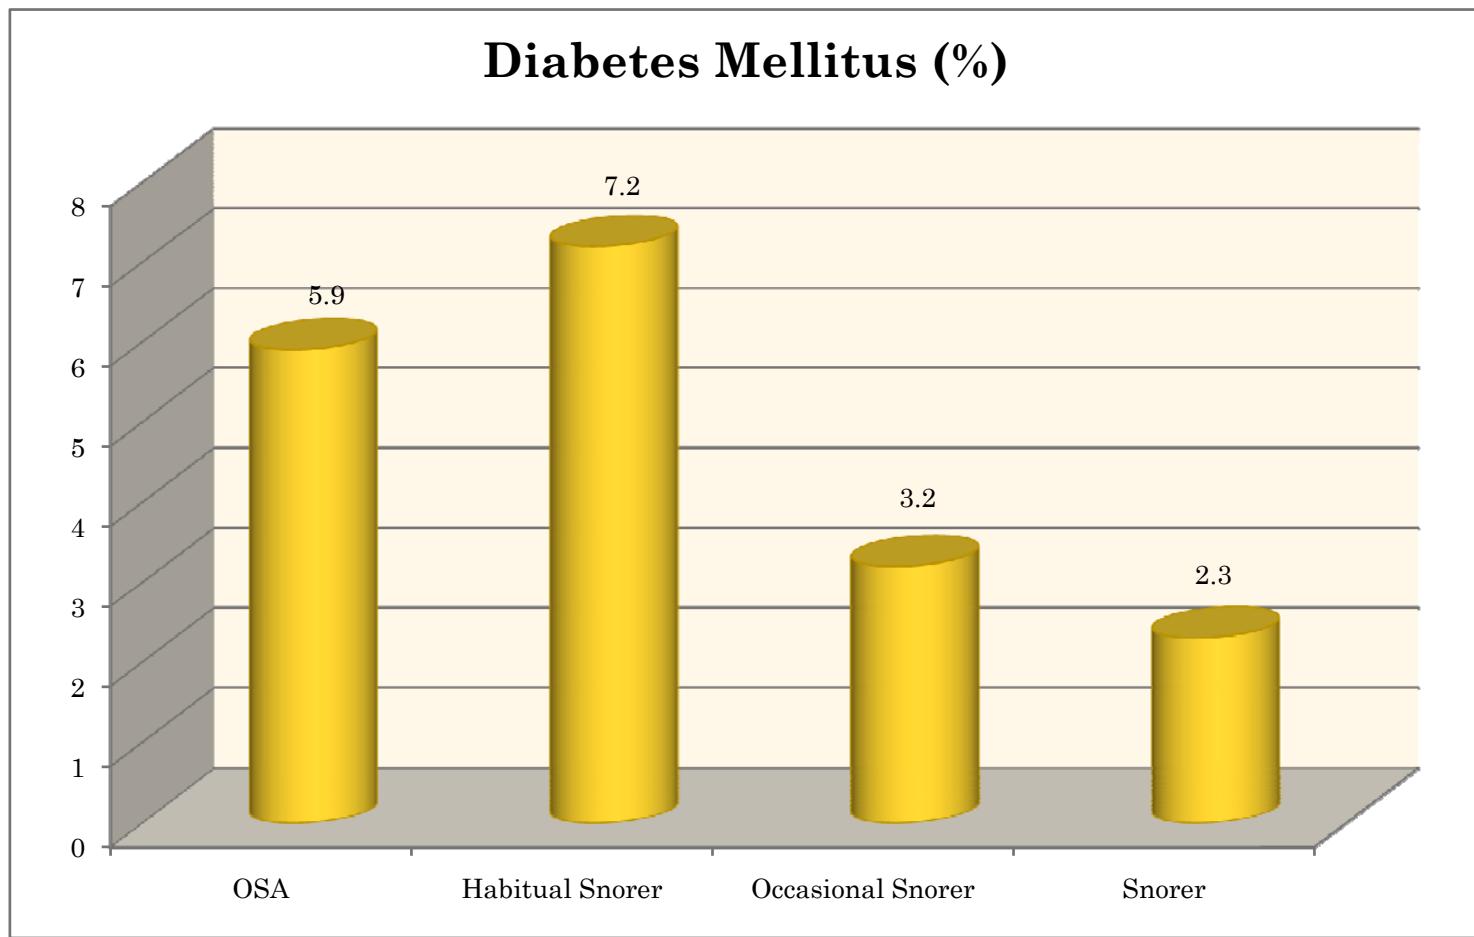

N= 2439	Total	Men (n=1801)	Women (n=638)
<b>“OSA”</b>	<b><u>11.1%</u> (n=271)</b>	<b>13.1% (n=236)</b>	<b>5.5% (n=35)</b>
<b>HABITUAL SNORERS</b>	<b><u>29.7%</u> (n=725)</b>	<b><u>34.8%</u> (n=627)</b>	<b><u>15.4%</u> (n=98)</b>
<b>Occasional snorers</b>	<b>17.9% (436)</b>	<b>18.4% (331)</b>	<b>16.5% (105)</b>
<b>NORMAL</b>	<b>38.8% (947)</b>	<b>31.3% (564)</b>	<b>60.0%</b>

# PHENOTYPES OF SDB

Diagnostic Gold standards for OSA (PSG)

- AHI  $\geq 5$  plus symptoms

Severity

Mild : AHI 5-15 events/hour

Moderate : AHI 15-30 events/hour

Severe : AHI  $\geq 30$  events/hour

Sleepy OSA

- severe OSA
- Mild OSA

Non-sleepy OSA

- severe OSA
- Mild OSA

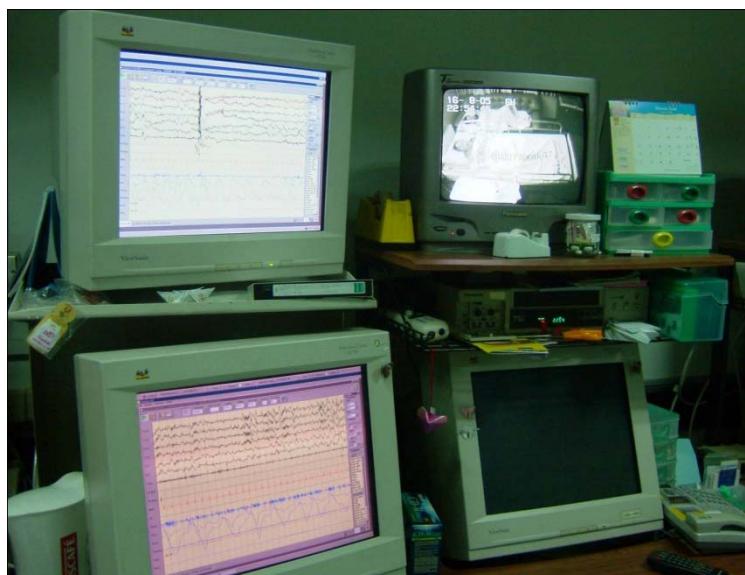

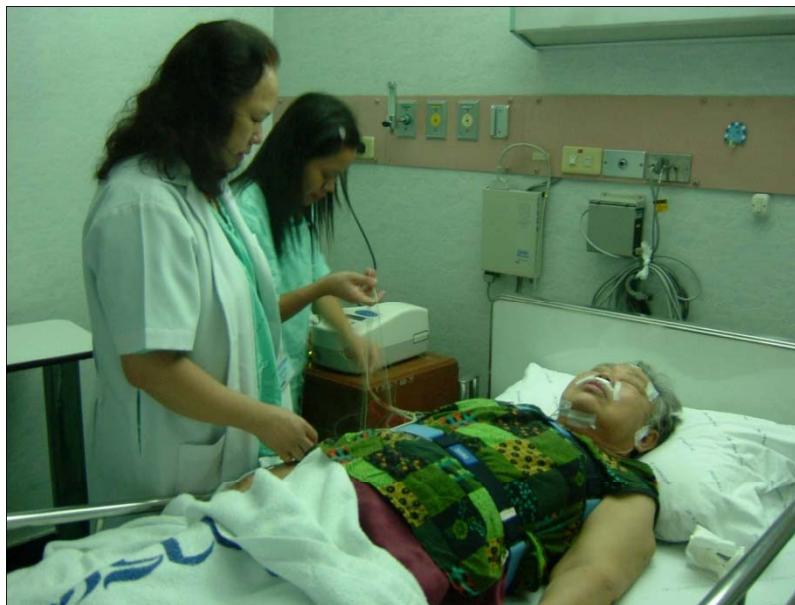

OSA with

- Insomnia
- Fatigue
- Neuropsychiatry

UARS

Habitual  
snore

Standard overnight polysomnography

# PORTABLE MONITORING

## THE NEEDS TO CONTINUE THIS STUDY

- To-date there is **no single** epidemiological study in Thailand to study obstructive sleep apnea by using standard polysomnography or cardiopulmonary monitoring ( we need **AHI!!!!**)
- Correlation of cardiovascular consequence of OSA in Thai subjects needs to be demonstrated ( Do we get the same extent of CVS consequence as do western subjects?)
- What is the cut-off point (AHI) for OSA in Thais?
- What are the risk of developing OSA in Thais??  
( How obese we have to be before developing OSA??)

- To define “ phenotype” of OSA
  - Sleepy vs non sleepy OSA
  - Mild to moderate OSA
  - Non-obese vs obese OSA
- ( What will happen to them??)
- In OSA subjects with other comorbid cardiovascular risk, what effect does OSA add on?
- In OSA subjects without other comorbid CVS risk, what is the sole effect of having OSA?

- To detect bio-marker for systematic follows of subjects to detect and predict CVS end-organ damage.

# RANDOMIZATION OF POPULATION

	Normal	OSA	Habitual snorers	Occasional snorers
Bangkok	844	234	636	373
Central	33	12	32	23
North	32	10	27	15
South-east	12	4	14	9
South	6	4	3	6
East	4		3	2
